

**Nigel Stevens**

**BR (WR) Stop Signal from Wizard Models kit – With Servo Drive.**

Ex Derek Munday – Model Signal Engineering steel post stop signal.

Alterations from kit as supplied:

Bearing alterations from wire in tube to more substantial 12BA bolt with nut soldered to front of arm. Return weight crank again 12 BA bolt. The final and lamp 3D printed parts from Modelul. Ladder reinforced with side strips.

The nut and bolt substitutions make it easier to assemble and paint. Lamp is not lit – next stage of development.

Servo is New Power metal geared XLD-9HMB driven by Model Electronics Railway Group servo control board with additional power on led and self-resetting fuse protection.
